

# iCUE Global Object

WIDGET API VERSION 1.4.0

The `iCUE` global object provides utility functions and properties for HTML widgets. Automatically available in the JavaScript context of every widget.

## Properties

| Property                  | Type                 | Description                                                                               |
|---------------------------|----------------------|-------------------------------------------------------------------------------------------|
| <code>iCUELanguage</code> | <code>string</code>  | Current iCUE interface language ( <code>"en"</code> , <code>"de"</code> , etc)            |
| <code>fpsLimit</code>     | <code>number</code>  | FPS limit for widget rendering (default: <code>30</code> )                                |
| <code>isPreview</code>    | <code>boolean</code> | <code>true</code> when the widget runs in preview mode, <code>false</code> on real device |

```
console.log(iCUE.iCUELanguage); // "en"
console.log(iCUE.fpsLimit); // 30
console.log(iCUE.isPreview); // true in preview/mimic, false on real device
```

## Methods

`defaultTemperatureUnit()` returns: `string` - `"°C"` (metric) or `"°F"` (imperial) based iCUE settings.

```
const unit = iCUE.defaultTemperatureUnit(); // "°C"
```
