

search-combobox

Searchable dropdown with async search results.

Attributes

Attribute	Type	Description	Support JS expressions
<code>data-placeholder</code>	<code>string</code>	Placeholder text for search input	✓
<code>data-values</code>	<code>function</code>	Search function (receives query, returns results)	✓
<code>data-default</code>	<code>function</code>	Function returning default value	✓

Output Value

`string`

 - Selected value, typically an ID returned by the search provider

Example

Manifest:

```
"modules": [  
  "modules/CitySearch.mjs"  
]
```

HTML:

```
<meta name="x-icue-property" content="city"
      data-label="tr('City')"
      data-type="search-combobox"
      data-values="CitySearch.search"
      data-default="CitySearch.getDefault"
      data-placeholder="tr('Search city...')">
```

Usage in JavaScript

```
console.log(city); // "12345" (selected city ID)
```

Reference Implementation

See the **Weather** widget for a complete implementation: `<<iCUE install
